

IN THE PALM OF YOUR HAND STARTING AT \$1,000

► Livorsi Marine's new QR Series (Quick Response) throttles were designed specifically for Mercury Marine's DTS-compatible engines. The shorter levers make the controls great for tight dash spaces and allow for quicker response time, and the ergonomically-designed knobs are comfortable on the palm of your hand. With up to three trim switches integrated into the knob, your hand never has to leave the controls, which include electronic shifting and throttle to make maneuvering in tight dock spaces easier. The controls come standard with a chrome finish, but you can create your own color combination with 11 brilliant colors available on the knobs and base plate.
