

## Vantage View Bezel Pod Mounting Reference

Model Number: 458VVBPA + COLOR

**PLEASE NOTE:**

When printing the template, make sure your print settings do not resize the document.

Depending on the angle you want the switches positioned, you will need to cut out a notch from the gauge cut out in order to accommodate the wire harness. This clearance should be no more than 5/16" x 9/16" to ensure the bezel will cover the cut out.

view from behind the dash

Once the gauge is mounted to the dash panel you will need to make the connection to the master harness.

Male connector from the bezel pod

Female connector from the master harness

When properly connected, you will hear a “click”, indicating a good connection. Double check the connection, ensure locking tabs are properly locked by gently tugging at the connectors.
