

Low Lux Night Vision Camera

The Low Lux Night Vision camera is a safety device that extends your work hours on the water. The black and white picture allows for safe maneuvering of waterways or when docking. Use as a stand alone device or an enhancement to radar. The 25 mm low lux camera connects to any monitor with a RCA video jack, or add a DVR to record your trip.

The camera can be mounted permanently or use the optional vacuum mount for quick and easy removal. Measuring only 6" in length and 3.5" in diameter the camera is small enough to be stored after usage to prevent theft. This camera is a valuable tool in extending your time on the water, yet is priced far below thermal imaging systems.

With a small amount of ambient light the low lux camera will give the operator a detailed picture unlike thermal.

Works with all types of vessels - From ships, work boats, yachts, commercial boats to small runabouts and fishing boats.

The camera is sealed to IP66 rating and meets Coast Guard electrical standards. This assures that the camera will always deliver a reliable and high quality video image. Splash proof and damage resistant. Very durable and water tight for on deck mounting locations.

Match this camera with a DVR recorder for up to one week of continuous trouble free recording at a low cost.

| Description | Part Number |
|----------------|-------------|
| low lux camera | CNVLLW |
| vacuum mount | CVMR |

| Specifications | |
